

Channel Pass Filter

Trunk cable carrying many channels is connected to a **Sharp Vision Channel Pass Filter**. This channel Pass Filter will only allow specified band of channels at its output port and unwanted channels are not transmitted further.

The cable operator can use **Sharp Vision's Channel Pass Filter** to give limited no. of channels to certain customers paying less subscription, so as to distinguish customers paying more subscription.

Features:

- Ensures Passage of limited and desired number of channels
- Made as per your requirement of channel numbers
- Distinguishing between high and low paying customers
- Compete with a cable operator having less channels
- Increases cable operators' income
- Power Pass

Installation Guidance for Channel Pass Filters
